Cybersecurity Professional | Detection Engineering & SOC Operations

Core Competencies: *Detection Engineering | SOC Workflows | MITRE ATT&CK | SIEM | Windows/Linux Internals | Python & Bash Scripting*

PROFILE SUMMARY

Cybersecurity professional with hands-on detection engineering experience, having architected a SOC lab using Wazuh SIEM, Sysmon, and Windows 11 to develop and validate custom detection rules mapped to MITRE ATT&CK — including techniques involving registry, file-system, and process-level analysis. Practical exposure to VAPT, network security, and applied research in embedded/industrial systems security. ISC² CC and Google Cybersecurity certified; CEH in progress. Curious, detail-oriented, and adaptable, with a strong foundation in Windows/Linux internals and scripting.

TECHNICAL SKILLS

- **Detection Engineering:** Wazuh XML rule development, MITRE ATT&CK mapping, SIEM logic, alert validation
- **SOC Fundamentals:** Log analysis, incident investigation, Cyber Kill Chain concepts, common attack vectors
- **Systems:** Windows/Linux internals (processes, registry, file systems), Kali Linux, Ubuntu
- **VAPT & Network Security:** Burp Suite, OWASP ZAP, OWASP Top 10, Wireshark, Nmap, IDS/IPS, TCP/IP
- **Scripting:** Python, Bash

CERTIFICATIONS

API Security Certified Associate, Wallarm, February 2026 • Certified in Cybersecurity (CC), ISC², December 2025 • Google Cybersecurity Professional Certificate, September 2025 • CEH (in progress), Expected September 2026

EXPERIENCE

Cybersecurity Architecture Research Intern | iTelematics Software Pvt Ltd (EV.ENGINEER™) — July 2026 – Present

- Built the backend, database, and simulation logic for a Cyber Attack Simulator using AI-assisted development, modeling attacks like telemetry spoofing, replay attacks, and BMS intrusion
- Performed static and advanced static analysis on .apk malware files

Cybersecurity Intern | Redynox Cybersecurity Solutions — February 2026 (1 Month)

- Built a network lab (Ubuntu + Kali); analysed traffic in Wireshark and configured firewall rules
- Tested OWASP WebGoat for SQLi, XSS, and CSRF; documented findings with PoC and remediation steps

PROJECTS

SOC Lab: Threat Detection & SIEM Engineering |

github.com/Bhavyacyber/wazuh-soc-detection-lab

- Architected a SOC detection lab using Wazuh SIEM, Windows 11, Sysmon, and Kali Linux to collect, analyze, and investigate endpoint security telemetry
- Engineered and validated custom Wazuh XML detection rules mapped to MITRE ATT&CK, covering PowerShell encoded commands, VSS/SAM access (registry/file-system level), and suspicious file creation activity
- Validated detections through live Wazuh alerts, including custom Rules 100001–100003 with severity levels 10, 12, and 15

OWASP Juice Shop — Vulnerability Assessment (VAPT) | February 2026

- Exploited Auth Bypass, IDOR, and XSS; produced a formal VAPT report with OWASP Top 10 mapping and impact analysis

EDUCATION

M.Tech — Structural Engineering | Aditya Engineering College (A), Kakinada — 2022–2024

B.Tech — Civil Engineering | Aditya Engineering College (A), Kakinada — 2018–2022
